To Whom It May Concern:

As Sheriff of Tulsa County, it is my duty to maintain a safe, healthy and clean environment at each of my facilities. One of my greatest concerns was MRSA, as it has become more relevant in today's society.

While researching ways to minimize the risk of MRSA, I came across Staphacide. This product is formulated for public institutions. It is based on a new technology, and is the only single source product on the market that is registered and approved by the Environmental Protection Agency.

Staphacide is a hard surface disinfectant that kills broad spectrum bacteria twenty times faster than other brands. It is the only hard surface disinfectant that kills the resistant staph bacteria, MRSA and VRE within two minutes of being applied. Staphacide will not irritate the skin, is non-flammable, non-toxic, does not cause bacteria resistance and requires no rinsing.

The Tulsa County Sheriff's Office began using Staphacide sixteen months ago, since that time the jail has been free of MRSA.

As well as implementing the use of Staphacide in my facilities, we also began to use Jep-14. This product is an environmentally friendly cleaner and degreaser that is extremely effective and very economical. Jep-14 is biodegradable, non-flammable, non-corrosive, non-hazardous, odorless and has an A1 USDA approval. It must be diluted with water to activate; therefore it lasts longer and goes farther than other cleaning products.

I highly recommend both these products for use in any facility that has a large volume of people and activity. I truly believe these products have had a positive impact in maintaining a healthier, cleaner and safer environment in the jail and the offices of the Tulsa County Sheriff's Office.
