RE:

Adam

The Anchor Elmira Production team would like to thank you for helping us keep our facility clean. We use your Jep 14 material in our Pressure washer system to clean the floors. Jep 14 has become the primary cleaning material on all IS machines. It has been used with rags to also wipe the machines off and the end of each shift. Jep 1 has become the only cleaning solution used in Machine Repair for cleaning IS parts prior to repair. Several different types of cleaning solvents, soaps and methods have been experimented with. With Jep 1 in our agitating parts cleaner we have cut down on the need to sand blast parts in order to clean them. Typically with in an hour cycle time IS parts come out of the tank and right to the mechanics bench for repairs.

Sincerely
Sean T McCarthy
Machine Repair Supervisor
